Professional Summary

MSc Data Science graduate and client-facing AI/data professional with experience using Python, SQL and machine learning to translate complex business problems into practical technical solutions. Experienced in requirements gathering, stakeholder engagement, technical demos and presenting analytical findings in business language to support operational and commercial decisions. Built AI and LLM-based applications, including a retrieval-augmented generation knowledge base, alongside AWS/Kafka data pipelines and predictive models. Motivated to help customers apply data, AI and process intelligence to improve measurable business outcomes.

Core Skills

Customer and business: Client engagement, requirements gathering, technical demos, stakeholder management, executive presentations, technical-to-business translation, proof-of-value, commercial and operational analysis

AI and data: Python, SQL, machine learning, LLM integration, RAG, OpenAI API, FastAPI, ChromaDB, semantic search, data validation, quantitative analysis

Cloud and engineering: AWS, Kafka, S3, Glue, Athena, ETL, Docker, Git, data pipelines

Analytics and tools: Trend and exploratory data analysis, KPI development, forecasting, root-cause problem solving, process and workflow analysis, Tableau, Excel, Matplotlib, Seaborn, Jira

Professional Experience

Bar Supervisor (Part-time)

May 2024 – Present

Bierkeller

Nottingham, UK

- Supervise bar operations during high-volume shifts, coordinating team members to maintain efficient service, quality standards and a positive customer experience.
- Resolve customer queries and service issues professionally, using clear communication and sound judgement in a fast-paced environment.
- Process cash and card transactions accurately, follow venue procedures and support smooth shift handovers.

Applied Mathematical Science Intern

December 2023 – May 2024

University of Nottingham

UK

- Applied statistical, mathematical and computer-vision techniques to photovoltaic-module data to improve diagnostic accuracy.
- Cleaned, transformed and validated analytical datasets, checking model outputs for accuracy and consistency.
- Interpreted technical results and presented them in a clear, decision-ready format to academic and project stakeholders, using visualisation to evidence recommendations.

Python Developer / Machine Learning Engineer

September 2022 – July 2023

Genuine Automation

India

- Worked directly with clients and senior stakeholders to understand business challenges, clarify requirements and shape data-driven technical solutions.
- Delivered technical presentations, solution demonstrations and analytical recommendations in clear business language to support stakeholder decisions.
- Built Python data-science solutions and analytical workflows, translating AI and data outputs into practical recommendations linked to operational efficiency and commercial value.
- Partnered with cross-functional teams to assess solution feasibility, prioritise requirements and support delivery from discovery through implementation.

Selected Projects

AI Knowledge Base with Retrieval-Augmented Generation | *Python, FastAPI, ChromaDB, OpenAI API*

- Built an LLM-based application that turns unstructured documents into a searchable knowledge base for evidence-led question answering, with source traceability for every answer.
- Designed ingestion, chunking, embedding and indexing workflows; implemented semantic search in ChromaDB and FastAPI endpoints returning structured outputs for reporting.

Real-Time Data Pipeline and KPI Dashboard | *Python, Kafka, AWS Glue, Athena, S3, SQL*

- Built an end-to-end pipeline streaming live market data through Kafka into Amazon S3, with AWS Glue and Athena ETL layers to clean, catalogue and query data at scale.

- Produced KPI-ready datasets and dashboards enabling trend analysis and low-latency risk monitoring, with data-validation checks.

Time-Series Forecasting: Sub-Surface Water Discovery | *Python, Statistics, Deep Learning*

- Analysed 30 years of geospatial time-series data to quantify the relationship between rainfall and water-table levels, building LSTM and CNN models achieving $R^2 = 0.99$ and $RMSE = 0.014$ on evaluation data.

Education

MSc Data Science — University of Nottingham, UK

Statistics, mathematical modelling, machine learning, data mining, data visualisation, time-series analysis.

BEng Electronics and Telecommunication, Honours in IoT — Savitribai Phule Pune University, India

GPA: 8.7/10

Additional

Presented research findings at academic conferences and contributed to published research papers. Strong Kaggle competition performance. Fluent in English.
